

CasellaDrive Software

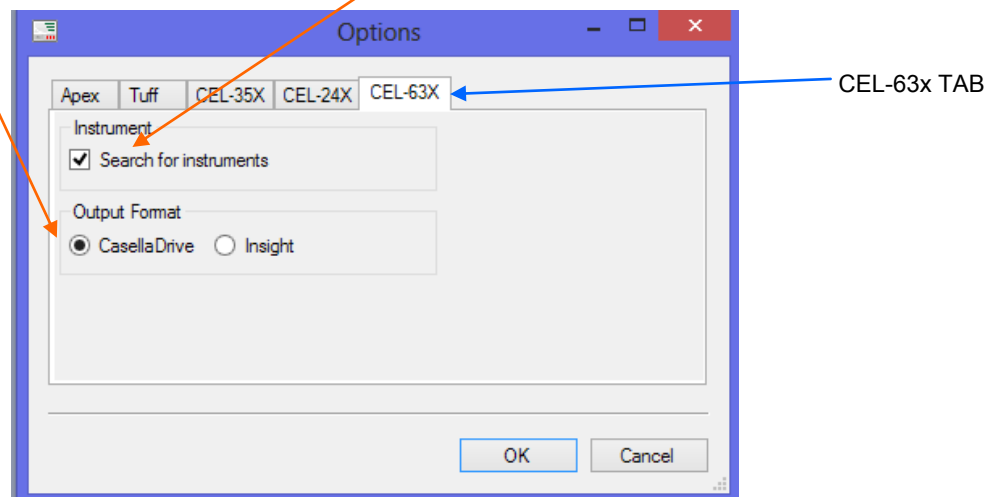

The CEL632 and CEL633 ranges of sound level meters are Data Logging instruments. The easiest way to access the stored measurements is to use the **CasellaDrive** software. With this running on your computer the meter will work like a memory stick, showing as an extra drive on your computer, so you can copy the files to your hard drive or network. The files can be read directly using most spreadsheet programs or word processors.

Installing

1. Download CasellaDrive from: www.noisemeters.com/downloads/caselladrive/
2. Install and then run CasellaDrive

Configuring

1. Find the CasellaDrive icons in your System Tray: 
2. Right-click and select **Options...** from the menu
3. Select the CEL-63x TAB and enable the "Search for instruments" option
4. Make sure Output format is Casella Drive

Viewing Measurements

1. Connect the meter to your USB port, allow a few seconds to connect
2. View the files with Windows Explorer or load directly to your spreadsheet
